

Corner 1-MCP

The Corner 1-MCP style enclosure takes advantage of the already sealed portion of an existing CA room for the treatment of 1-MCP on fruit and vegetables. This temporary chamber provides a sealed space for application without the need for constructing separate expensive treatment rooms that may only be used 20 times a year. The existing constructed walls and ceiling provide three sides for the chamber while the 2 sided curtain partitions the room to a more manageable size for a small treatment space.

The zippered door allows for simple access to the space. Slide the zipper up on each side then roll the middle material up and suspend to the ceiling. The side can also be pulled to widen the opening.

Any size curtain can be manufactured to fit your desired lot size.

It has been proven that timely application of the 1-MCP gas is a very important step to the success of the treatment. Some fruits require treatment within three days of harvest.

- Custom Made Sizes
- Durable 22 Mil Material
- Airtight to Treatment Standards

- Waterbags Provided for Floor Seal
- Scrim Reinforced Material
- Dependable, Proven Zippers
