

# Splitter 1-MCP

The Splitter 1-MCP style enclosure takes advantage of an existing CA room for the treatment of 1-MCP on fruit and vegetables. This plastic wall provides twin sealed spaces for application when fruit is not available to fill the entire room. The existing constructed walls and ceiling provide three sides for the chamber while the inner curtain partitions the room to a more manageable size for a small treatment space.

While one side is full and under treatment, the other side can be staged with bins for the next treatment. Once finished, fruit can be shuffled to a long term CA or every room in the facility could have these partitions to help with the demanding and timely treatment of 1-MCP.

It has been proven that timely application of the 1-MCP gas is a very important step to the success of the treatment. Some fruits require treatment within three days of harvest. Treatments are expensive and these spaces will have a short term payback when applications are 100% effective.

- Custom Made Sizes
- Durable 22 mil material
- Airtight to treatment standards
- Scrim reinforced material
- Trolley System to ease handling the front

- Could stay in room during normal CA operation
- Sealed to floor and ceiling
- Magnetic fastening
- Tracks side to side to next treatment
- Waterbags provided for floor seal on front door
