

# Ethylene Filters

*high-power granules,*  
Minimum of 3 l/kg absorption rate

The Bioconservacion Ethylene filters are a flexible air-treatment system, which ensures a hygienic environment, free of ethylene and other harmful micro-organisms.

Shippers, exporters, or other retail businesses that deal with the storage of fruits, vegetables, or flowers can benefit by using the Ethylene filters.

By reducing the ethylene levels in retail coolers or transport containers the filters can increase sales, reduce losses through rot, and improve the supermarket quality image.

These Ethylene filters use new BI-ON granules to absorb ethylene, fungi spores, bacteria, and bad odors. Firmness, color, and freshness of produce are maintained, thereby reducing waste. The BI-ON granules are disposable, and compatible with Organic Produce; they do not leave any chemical residues on food (non-additive). This new BI-ON technology has longer life of the media which ultimately helps save costs.

Ethylene filters come in boxes of 6 units.
